

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-88. (canceled)

89. (currently amended) A system for sharing media to play comprising:
a first computer system configured to connect to a ~~second computer system~~ server via a communication network;
wherein said ~~second computer system~~ server comprises references to audio data stored on said ~~second computer system~~ server, where said audio data is from a plurality of sources and is stored in condition for retrieval or playback;
wherein said first computer system is configured to obtain said references to said audio data from said ~~second computer system~~ server;
wherein said first computer system is configured to create a mediagram specified by a creator user wherein said mediagram comprises~~comprising~~ said references enabling retrieval or playback of said audio data wherein said mediagram comprises an atomic unit of a media file having at least one reference to said audio data and a set of media attributes;
wherein said first computer system is configured to ~~transfer~~ publish said mediagram to said ~~second computer system~~ server via said communication network;

wherein said ~~second computer system~~ server is configured to receive and store said
mediagram that comprises said references enabling retrieval or playback of said
audio data;

wherein said mediagram is referenced in an ordered list on said ~~second computer~~ server;

wherein at least one third computer system said ~~second computer system~~ is configured to
connect to ~~at least one third computer system~~ said server via said communication
network;

wherein said ~~second computer system~~ server is configured to cause said ordered list
comprising said mediagram to be displayed on said at least one third computer
system in a way that enables ~~said user~~ a user of said at least one third computer
system to select a list item for retrieval or playback to said at least one third
computer system; and,

wherein said ordered list and contents of said ordered list are altered dynamically as a
result of input provided to said ordered list ~~based on actions of said user of a user~~
at said ~~at least one third computer system~~ [;].

90. (previously presented) The system of claim 89 wherein said contents of said
ordered list is altered based on a set of criteria.
91. (previously presented) The system of claim 89 wherein said contents of said
ordered list is altered based on a set of behaviors.

92. (previously presented) The system of claim 89 wherein said contents of said ordered list is altered based on a set of behaviors and criteria.
93. (currently amended) The system of claim 89 wherein said ~~second computer~~ system server is configured to order said mediagram within said ordered list based on a ranking.
94. (currently amended) The system of claim 89 wherein ~~said ranking~~ a ranking of said mediagram within said list is determined by ~~a creator~~ said a creator-user.
95. (currently amended) The system of claim 89 wherein ~~said ranking~~ a ranking of said list items is presented to said user to assist in selection.
96. (currently amended) The system of claim 89 wherein ~~said ranking~~ a ranking of said list items is based on usage of said list items.
97. (previously presented) The system of claim 89 wherein said contents of said ordered list is stored in at least one database.
98. (previously presented) The system of claim 89 wherein said audio data referenced by said mediagram is retrieved via download to said at least one third computer system.

99. (previously presented) The system of claim 89 wherein said audio data referenced by said mediagram is sent to said at least one third computer system from a media streaming server.
100. (previously presented) The system of claim 89 wherein said audio data referenced by said mediagram is retrieved from a peer computer.
101. (previously presented) The system of claim 100 wherein said peer computer is said third computer system.
102. (currently amended) The system of claim 89 wherein said first computer system is configured to convert said mediagram into a format suitable for transfer to said ~~second computer~~server.
103. (previously presented) The system of claim 89 wherein said ~~a~~ second user is notified when said mediagram is available.
104. (previously presented) The system of claim 103 wherein said notification said mediagram is available is sent via an email message containing a link to said mediagram.
105. (currently amended) The system of claim 89 wherein said user enters user registration information for authenticating access to said ~~second computer system~~

server before said mediagram can be stored on said ~~second computer system~~
server.

106. (previously presented) The system of claim 89 wherein said user installs a client plugin from software downloaded from a server.
107. (currently amended) The system of claim 106 wherein said client plugin generates a unique code for identifying said client plugin to said ~~second computer system~~
server.
108. (previously presented) The system of claim 106 wherein said client plugin comprises software associated with a browser to affect helper application functionality.
109. (previously presented) The system of claim 106 wherein said client plugin functionality and browser functionality are combined to form a client component.
110. (currently amended) The system of claim 89 wherein said user authenticates access to said ~~second computer system~~ server using registration information.
111. (currently amended) The system of claim 89 wherein said ~~second computer system~~ server comprises a plurality of computers.

112. (currently amended) The system of claim 89 wherein ~~said-second-computer~~
~~system~~ server generates hyperlinks to said mediagram to enable publication via a
web page.
113. (previously presented) The system of claim 89 wherein ~~a-creator~~ said creator-user
may grant permission to publish said mediagram.
114. (currently amended) The system of claim 89 wherein photo data stored on said
first computer system and related to said mediagram is uploaded to ~~said-second~~
~~computer-system~~ server in connection with uploading of said mediagram.
115. (currently amended) The system of claim 114 wherein a program on said first
computer system resizes said photo data prior to said uploading of said photo data
to ~~said-second-computer-system~~ server.
116. (currently amended) The system of claim 89 wherein ~~a-creator~~ said creator-user of
said ordered list controls contents of said ordered list.
117. (canceled)
118. (canceled)
119. (canceled)

120. (canceled)

121. (canceled)

122. (canceled)

123. (canceled)

124. (canceled)

125. (canceled)

126. (canceled)

127. (canceled)

128. (canceled)

129. (canceled)

130. (canceled).

131. (canceled)

132. (new) The system of claim 89 wherein said set of media attributes contained in said mediagram is changed on said server and said server is configured to propagate changes to said mediagram automatically.

133. (new) A method for sharing media to play comprising:
obtaining a reference to media on a server wherein said media is capable of retrieval or playback from said server using said reference by a first computer system;
creating a mediagram as an atomic unit having at least one reference to said media on said server and a set of media attributes wherein said creating occurs on said first computer system as specified by a creator user wherein said media attributes and said reference to said media are associated for retrieval or playback from said server;
publishing said mediagram to said server;
referencing said mediagram in an ordered list of items for retrieval or playback via said server wherein said ordered list is organized in accordance with a set of criteria or user behaviors;
obtaining a set of ordered lists from said server wherein said set of ordered lists comprises said ordered list of items for retrieval or playback;
presenting to a user for selection said set of ordered lists;
navigating said set of ordered lists;

retrieving said media for playback when said user selects an item from said ordered list;

and,

altering said ordered list based on actions of said user.

134. (new) The method of claim 133 wherein said mediagram comprises a set of list attributes and references to a second set of ordered lists.
135. (new) The method of claim 133 wherein said mediagram comprises a second set of media attributes, a second set of at least one references to media, and references to a third set of ordered lists.
136. (new) The method of claim 133 wherein said media comprises audio data and said method further comprises arranging said audio data to play in accordance with ordering criteria.
137. (new) The method of claim 133 further comprising displaying said set of ordered lists via a three frame display comprising a header frame showing a highest level, a navigation frame showing a title of a selected mediagram, and a content frame showing said selected media associated with said selected mediagram.
138. (new) The method of claim 133 further comprising:

changing said media attributes on said server for said mediagram and wherein said mediagram changes are propagated automatically.
